

Artificial Intelligence

Artificial Intelligence (AI) is a field of computer science that focuses on creating systems capable of performing tasks that normally require human intelligence.

Machine Learning

Machine Learning is a subset of AI that enables computers to learn from data without being explicitly programmed.

Deep Learning

Deep Learning uses neural networks with multiple layers to learn complex patterns from data.

Embeddings

Embeddings are numerical representations of text. They convert text into vectors that computers can understand.

Vector Database

A vector database stores embeddings and helps perform similarity search.

FAISS

FAISS is an open-source vector database used for storing and searching embeddings efficiently.

LangChain

LangChain is a framework that connects LLMs with external data sources and tools.

LlamaIndex

LlamaIndex helps connect LLMs with documents and enterprise data.

RAG

Retrieval Augmented Generation retrieves relevant chunks from documents and sends them to an LLM to generate answers.
